

Daniel Matthews

Curriculum Vitae

About Me

I'm a 21 year old student currently living in Carlisle and studying multimedia at the University Of Cumbria with a passionate focus on designing and developing for the web. I'm experienced in both design, and development, equally at home in Photoshop as I am with code. And most important of all, I love what I do.

Experience

General Assistant, Tesco Whitehaven.

I worked for around six months as a general assistant in the dairy department at Tesco in Whitehaven.

Assistant Science Technician, Whitehaven School

I worked at my old school for about four months as a temporary Assistant Technician while another technician recovered from pneumonia.

Physics Technician, Whitehaven School

This was more temporary work. With this job I was dropped in at the deep end, the previous trained technician had left, and I was hired to replace him until a permanent qualified technician could be found.

Administration Assistant, Whitehaven School

While working at the above post in the Physics department, I divided my time between that job and working as admin in the citizenship department.

Administration Assistant, Cumbria County Council

I worked temporarily for Cumbria county council's child services department, assisting the head of child services with running the various youth programs in and around the Copland district.

Education

Ehenside Community School - 1999-2004: Science GCSE (AA), Maths GCSE (B), English Lit/Lang GCSE (CC), Electronics GNVQ (C), French (C), Music (B).

Whitehaven Post 16 Centre - 2004-2006: A Level Physics, AVCE Double Award In ICT (BC), Key Skills Qualification In ICT, Key Skills Qualification In Communications.

Skills/Other

My main skills lie in HTML/xHTML and CSS2/CSS3, and jQuery languages. I have a full grasp of web standards, accessibility, validation and their effects on sites. I also passionately follow the latest web design, tech, standards and development news daily; in order to keep my skills up to date. I have experience in theming for content management systems like Wordpress, and a thirst for knowledge when it comes to new techniques, ideas and frontiers for the web. And along the same lines as that, a keen lust for developing for mobile devices such as the iPhone and iPad.
